Resistant vs Sensitive − Up : GO Biological Process
cell surface receptor protein tyrosine kinase signaling pathway
blood vessel morphogenesis
positive regulation of locomotion
positive regulation of cell migration
cellular response to lipid
positive regulation of cell motility
chemotaxis
taxis
regulation of actin filament−based process
regulation of monoatomic ion transport
extracellular matrix organization
extracellular structure organization
external encapsulating structure organization
regulation of cellular response to growth factor stimulus
tissue homeostasis
anatomical structure homeostasis
cell chemotaxis
positive regulation of inflammatory response
dendritic spine development
dendritic spine morphogenesis
